

BOOST PPA™

Many energy buyers don't have sufficient load to procure from a utility-scale project, however they want a low-cost, long-term renewable energy solution. While there are distributed and community solar options, utility-scale renewable energy projects offer the benefits of renewable energy along with strong economics.

The solution: BoostPPA™, a utility-scale solar aggregation product that gives every participating buyer low power purchase agreement (PPA) pricing.

HOW BOOST PPA™ WORKS

The larger the project, the greater the economies of scale in developing it. By aggregating demand from multiple energy buyers, 7X Energy can spread development costs over a larger project and offer each buyer lower PPA pricing.

Benefit from a larger project

Take advantage of the economies of scale of a larger project.

Procure the capacity you need

Contract for capacity based on your needs.

Choose your term

Choose the term that best fits your purchasing requirements.

In this example, three buyers with smaller procurement appetites can each obtain the same low PPA price typical of a 50 MWac capacity plant.
