

SOLARBLOCKS+

A FIXED-BLOCK SOLAR + STORAGE POWER OPTION

7X's second generation offering, **SolarBlocks+**TM, is an innovative product that provides even greater block sizing and distribution options through the use of storage co-located with our solar facilities, rather than market balancing alone.

Like SolarBlocksTM, **SolarBlocks+** can be offered via direct power purchase agreement (PPA) with a host, or via a PPA with a load serving entity (LSE) with a back-stopping retail arrangement between the entity and the power buyer. **SolarBlocks+** offers leading edge additionality by enabling buyers to best fit shape to consumption profile, and the power procurement contracting can directly facilitate the solar-plus-storage project's financing, construction, and operation.

7X's **SolarBlocks+** product helps meet a buyer's need for more flexibility and control than a traditional solar only PPA allows. Solar+Blocks offers:

- shorter contract terms,
- 10 MW+ power (average of all blocks), and
- the ability to procure desired shape of power blocks (ie. 15-min/hourly blocks).

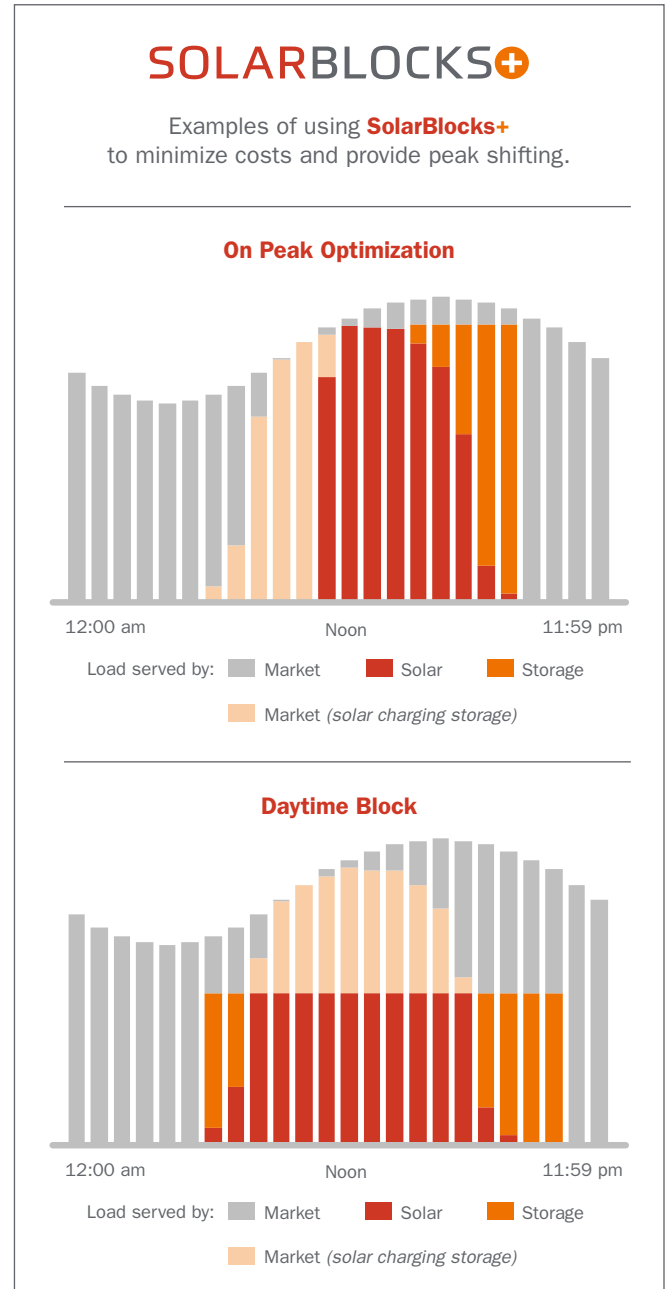

BENEFITS

Mitigate risk by designing shape to best mitigate volatility concerns for each individual buyer

Paramount commitment to sustainability by ability to match generation with load consumed

Contact 7X to determine how the SolarBlocks+TM product can work for you.
