

SOLARBLOCKS™

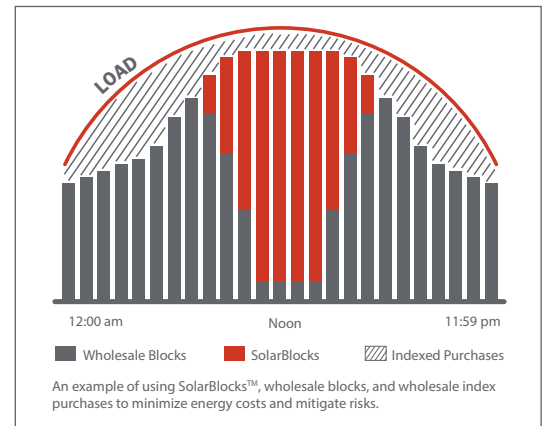

A FIXED-BLOCK RENEWABLE POWER OPTION

7X Energy’s innovative product, **SolarBlocks™**, is a fixed-block power purchasing strategy that enables energy buyers to procure blocks of solar generation from 7X developed projects, at a low fixed rate, covering peak hours when wholesale electric rates are often highest.

The *SolarBlocks* product can be purchased by load-serving entities and corporations in competitive electricity markets to remove intermittent variability from the facility by delivering fixed hourly blocks of energy. This solution allows buyers to not only lock in low cost energy during peak periods, but also qualify for the additionality and Renewable Energy Certificates (RECs).

7X’s *SolarBlocks* product also helps meet a buyer’s need for more flexibility and control than a traditional PPA agreement allows. The *SolarBlocks* product offers:

- shorter contract terms (as low as ten years),
- the ability to procure specific amounts of solar energy every fifteen minutes, and
- a hedge against on-peak prices.

BENEFITS

 **Reduce energy costs** with low-cost solar generation developed by 7X

 **Mitigate risk** by protecting critical on-peak load blocks from fuel price volatility

 **Manage your energy spend** with more precision than a traditional PPA allows

 **Enhance your commitment to sustainability** with additionality and RECs, as well as naming, marketing, and signage rights

Contact 7X to determine how the SolarBlocks™ product can work for you.
